Education

Arizona State University at Tempe, AZ - Bachelor in Science - Software Engineering (GPA 3.96) August 2022 - May 2026

Key Course Taken

- Algorithm and Data Structures
- Designs and Fundamentals
- Database Management
- Object Oriented Programming
- Computer Organization and Assembly Language
- Secure Software Systems
- Engineering Secure Software Systems
- Software Architecture and Engineering
- Principles of Distributed Software System
- Operating system and System Programming

Key Skills

- **Programming Languages:** Java, Python, C/C++, JavaScript, TypeScript, SQL, VBA, HTML, CSS, Bash, MATLAB, Dart, Fortran
- **Frameworks & Libraries:** Spring Boot, Node.js, Express.js, React, Vue.js
- **Databases:** MySQL, PostgreSQL, MongoDB, SQLite, Access, Amazon RDS, Amazon DynamoDB
- **Cloud & DevOps:** AWS (EC2, S3), Docker, CI/CD, GitHub Actions
- **Tools:** Visual Studio Code, Atom, Eclipse, IntelliJ, CLion, Android Studio, Git, Docker, Gradle, Excel, Node.js, Sketch, Astah
- **API & Backend:** RESTful APIs, GraphQL, Microservices, JWT Authentication
- **Testing:** JUnit, Postman, Selenium, Unit Testing, Integration Testing
- **System Design:** Distributed Systems, Client-Server Architecture, Multithreading, Scalability, Caching, Load Balancing
- **Communication Protocols:** HTTP/HTTPS, TCP/UDP, WebSockets, gRPC
- **Operating Systems:** Linux, UNIX, Windows, MacOS

Work Experience

Branch Operations Lead - JPMorgan Chase

January 2026 - Present

- Managed daily operations in a high-volume, regulated environment, ensuring accuracy, security, and compliance across financial transactions.
- Identified and improved workflow inefficiencies, enhancing operational processes and reducing processing errors.
- Utilized internal systems and data-driven decision-making to support transaction processing, risk management, and customer service delivery.

The Global Career Accelerator - Software Engineer

July 2025 - December 2025

- Built a high-performing, scalable website framework using HTML, CSS, and JavaScript
- Implemented back-end functionality to enable seamless user interactions and reliable feature integration reducing latency by 25%.
- Optimized load speed by 35% and scalability to meet performance benchmarks and improved responsiveness by 30%.
- Developed user-centric, aesthetically consistent interfaces aligned with organizational values, increased user satisfaction by 30%.
- Collaborated across stakeholders to translate requirements into shippable features and UI improvements delivering 20+ releases quarterly

Projects

• NASA Psyche Mission Educational Game: Unity, C#, REST APIs, Agile, Git, AWS

Developed an educational mobile game for NASA's Psyche mission, implementing gameplay systems and interactive UI features in Unity using C# to support mission-based simulations. Collaborated in an Agile team to deliver features through sprint planning, testing, and iterative development.

• Real-Time Notification System: Java, Spring Boot, WebSockets, Redis, REST APIs

Developed a real-time notification system using WebSockets and Redis Pub/Sub to deliver instant updates and handle asynchronous messaging across concurrent users. Designed backend services in Spring Boot to improve system responsiveness and scalability.

• Event Booking & Payment Simulation System: Java, Spring Boot, MySQL, REST APIs, Stripe API

Built an event booking system enabling users to reserve tickets and simulate secure payments, implementing database transactions and concurrency control to prevent double booking. Designed RESTful APIs with Spring Boot and MySQL to ensure data consistency and reliable request handling.

• Gym Scheduling System: Java, Gradle, MySQL

Developed a scheduling system to manage appointments between administrators, trainers, and customers, implementing backend services and database-driven workflows in Java. Designed relational data models and optimized query operations in MySQL to automate 90% of scheduling tasks and reduce manual errors by 40%

• E-commerce Platform: Java, Spring Boot, MySQL, React

Developed a full-stack e-commerce platform supporting product browsing, cart management, and secure checkout, handling 500+ transactions daily. Implemented user authentication, order processing, and RESTful APIs to improve performance and reduce checkout time by 25%.

• AI-Powered French Learning: Flask, Angular, OpenAI, RESTful APIs, MySQL, Python, Unit Testing, Integration Testing, Agile

Developed an AI-powered web app using OpenAI APIs to help students practice vocabulary and grammar, providing interactive feedback and improving accuracy by 40% for 200+ learners.
